WHICH WINDOW IS BEST FOR YOU?

STEEL FRAMES

- Steel windows are made from mild steel which has been extruded in specified sections and welded together to form a frame.
- Steel frames have to be painted, usually with an oil-based paint, they come coated in a primer.
- Steel frames come with all accessories - handles, hinges and stays.
- Burglar proofing in steel is easier as it can be welded to the frame.
- Steel is the most cost effective.

WOODEN FRAMES

- Most wooden frames in South Africa are made from meranti wood.
- Wood must be either oiled or painted with varnish
- Wood requires the same or more maintenance as steel, it can become brittle and soft.
- Wooden frames come with all accessories - handles, hinges and stays.
- Burglar proofing is not as effective, it has to be screwed into the frame.

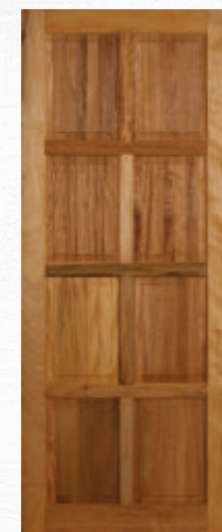

ALUMINIUM FRAMES

- Aluminium need the least maintenance, it does not need to be painted, but does oxidise over time and must be kept clean.
- Aluminium always comes with glazing and is fitted after building is complete.
- Aluminium is soft and can be damaged easily.
- Aluminium is more expensive than steel or wood, but the quality is superior.
